Engineering

Badar El Asery

Engineering and Assembly

The problem

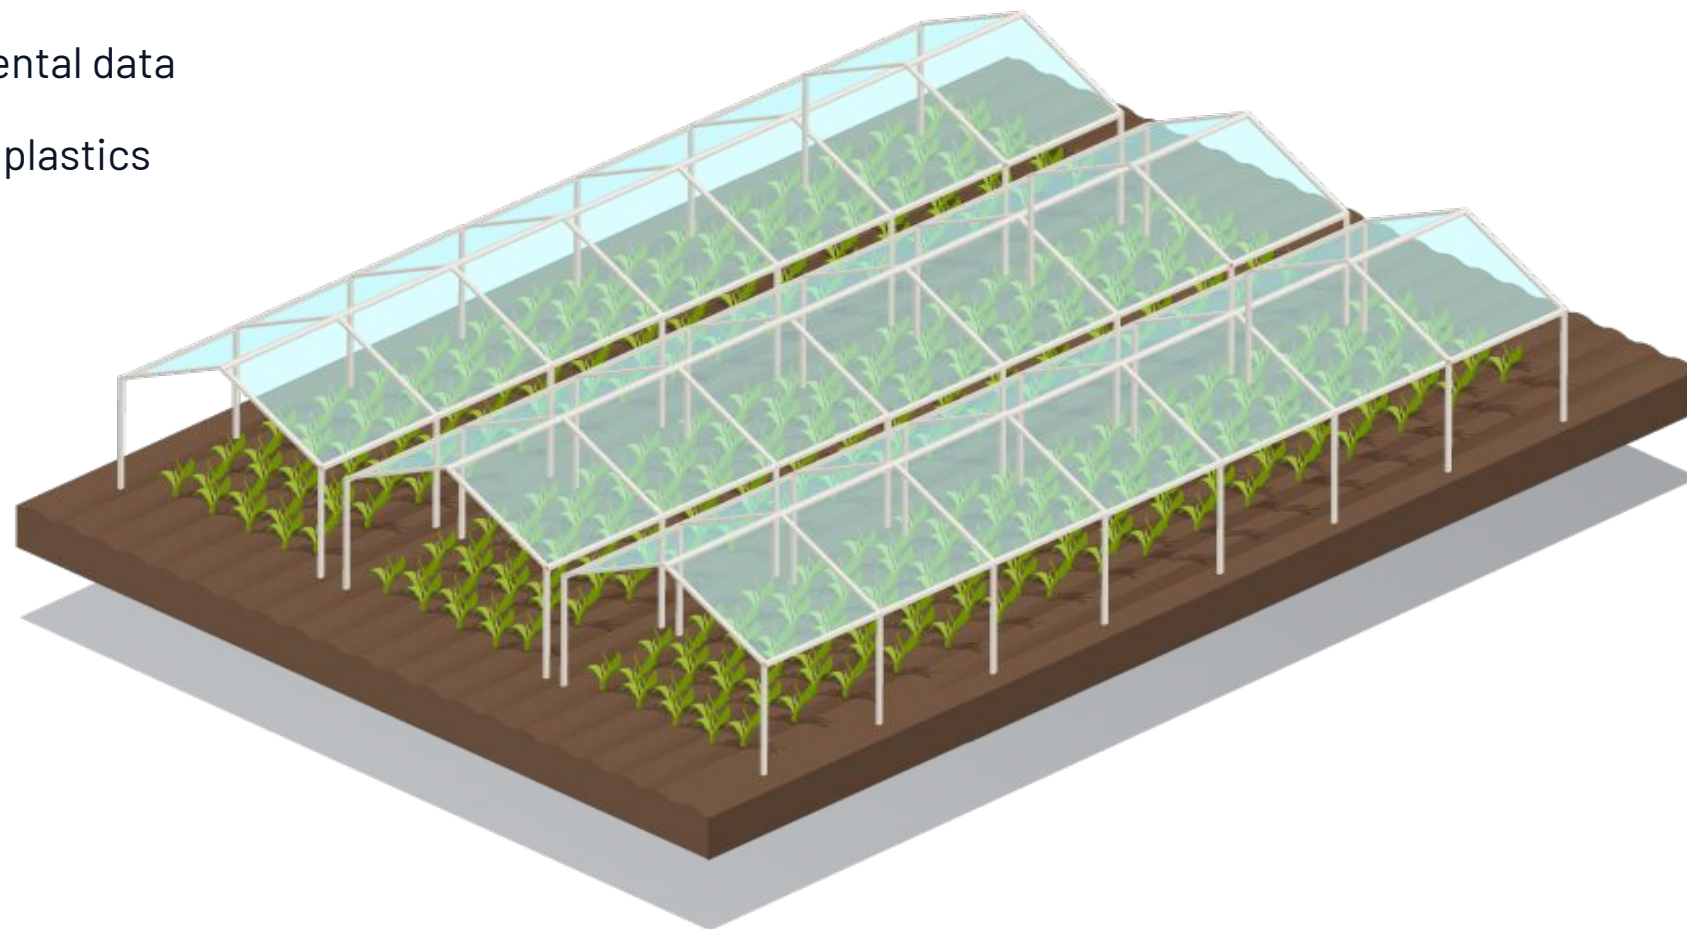

- Intensive farming is increasingly exposed to extreme weather events.
- Rising labour costs and shortages make managing covers more expensive.
- Handling plastics and nets manually is slow, imprecise and costly.
- Agricultural plastics have a limited lifespan: unnecessary exposure wears them out.
- Growers need to produce more and better, with fewer resources and greater traceability.

The solution

BEFORE

- Harvests exposed to climate risk
- Static farming structures
- Covers installed by hand
- Managed by personal judgement
- No environmental data
- Overexposed plastics

NOW · WALIA®

- Active structure that responds to its environment
- Automatic motorized covers
- Decisions based on real data
- Real-time weather sensors
- Longer-lasting plastics and nets

Full control from your phone

- Temperature
- Humidity
- Rainfall and wind
- And much more...
- Open / Retract plastics

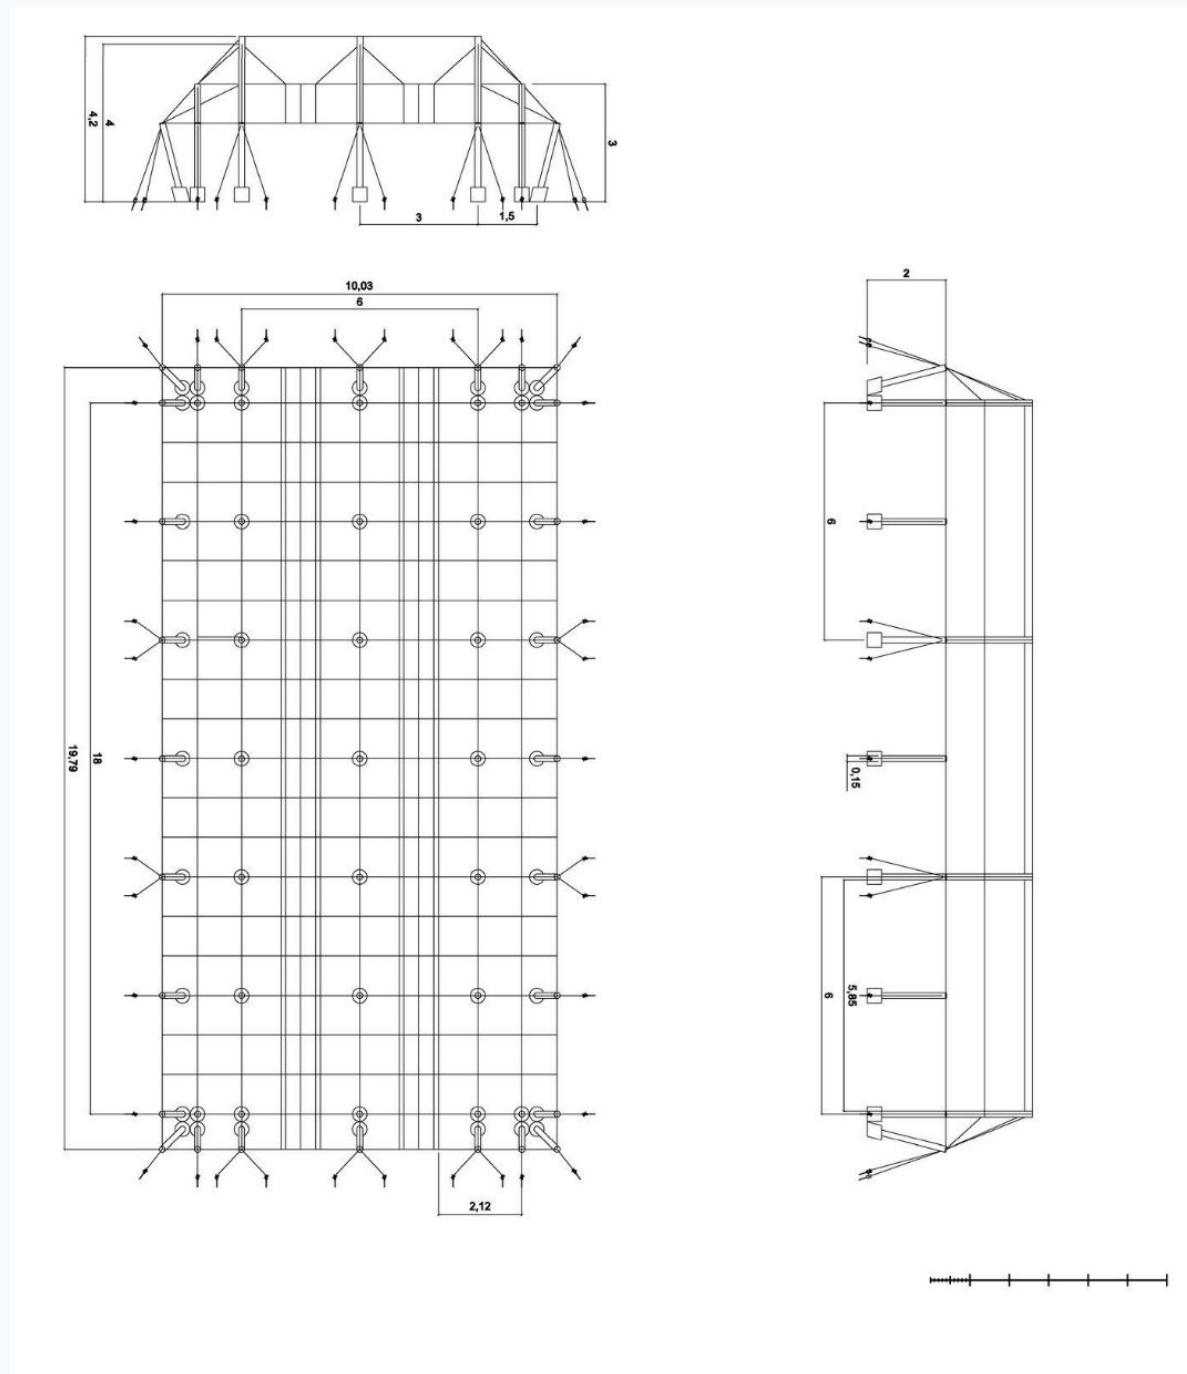

*"Our aim is not simply to motorize a cover.
We want to turn an agricultural structure into one that can
respond."*

Greenhouse design and structure

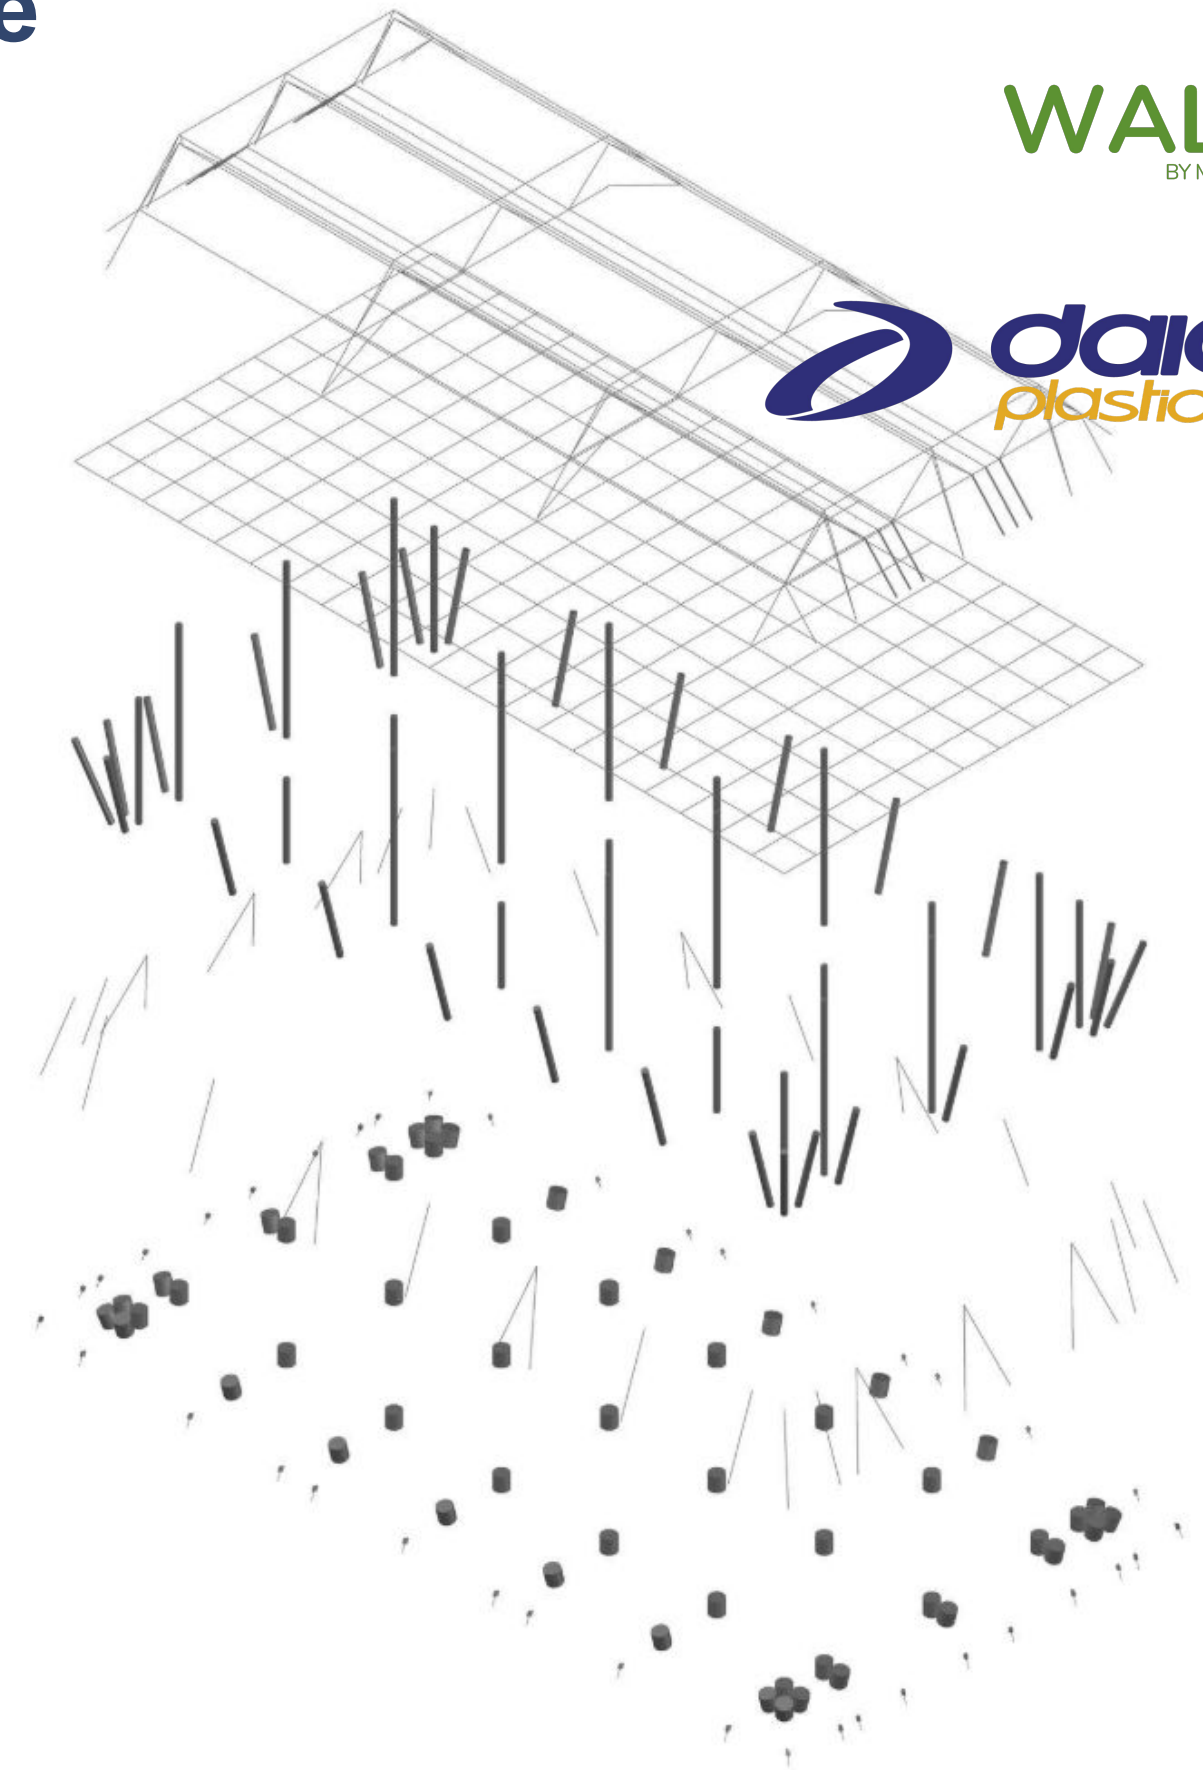

WALIA
BY MATEO E HIJO

daios
plastics sa

Dimensions tailored to each crop.

- Galvanized steel structure
- Compatible with multiple existing greenhouse models
- WALIA® mechanizes retractable plastics AND nets

How does it work?

WALIA APP

SENSORS

AUTOMATIC SYSTEM

Weather station

Solar panels

Motors and electrical system

Connectivity

Mobile app

Camera

WALIA
BY MATEO E HIJO

"Automation doesn't mean taking control away from the farmer."

Sensor data from inside the greenhouse.

Satellite data

Buttons to operate the mechanism

Remote-controlled security camera

Moving plastics and nets

Control of multiple side curtains.

MANUAL MODE

Activate the system at any time.

AUTOMATIC MODE

Responds to rain, wind or frost.
Scheduled actions.

COMPATIBLE CROPS

**WALIA® is already up and running
on real farms.**

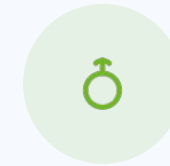

Table grapes

Dragon fruit

Citrus

Cherries

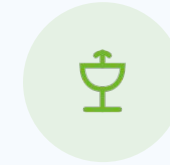

Blueberries

Kiwi

Berries

Other crops

REAL FOOTAGE

Protecting your plastics means protecting your investment

PROFITABILITY

30%

Higher plot yield compared with uncovered plots.

87

days earlier harvest

X

Fewer trips to the farm.

WALIA®, our smart greenhouse, is already up and running on real farms across Spain.

€5,000

Saved on plastic replacements per hectare for table grapes.

SUSTAINABILITY

20%

Water savings

30%

Pesticide savings
